

# Argentina

## The output of educational institutions and the impact of learning

- Upper secondary attainment is often seen as a minimum qualification for successful labour market participation. Although the general increase in educational attainment has seen a parallel decline in the share of 25-34 year-olds without upper secondary attainment, 14% of young adults across the OECD still left school without an upper secondary qualification. In Argentina, the share is 27%, which is higher than the OECD average.
- Higher educational attainment is often associated with better employment prospects and Argentina is no exception. In 2021 the employment rate among 25-34 year-olds with tertiary education in Argentina was 25 percentage points higher than among those with below upper secondary attainment and 19 percentage points higher than among those with upper secondary or post-secondary non-tertiary attainment. On average across OECD countries, the employment rate among 25-34 year-olds with a tertiary qualification was 26 percentage points higher than among those with below upper secondary attainment and 8 percentage points higher than among those with upper secondary or post-secondary non-tertiary attainment. While the positive link between educational attainment and employment rates holds for both men and for women across the OECD, it is particularly strong for women. In Argentina, 41% of women with below upper secondary attainment were employed in 2021, compared to 86% of those with tertiary attainment. In contrast, the figures were 83% and 92% for men.
- Across the OECD, the labour market benefits of tertiary attainment have proved especially strong during economic crises. This was also the case during the COVID-19 pandemic in Argentina. Between 2019 and 2020, unemployment for 25-34 year-old workers with below upper secondary attainment increased by 3.2 percentage points, by 0.6 percentage points for workers with upper secondary attainment and by 1.4 percentage points for workers with tertiary attainment. In 2021, unemployment for workers with below upper secondary attainment fell by 4.3 percentage points, compared to 2020, by 0.7 percentage points for workers with upper secondary attainment and by 1.7 percentage points for workers with tertiary attainment.

## Access to education, participation and progress

- Compulsory education begins at the age of 4 and ends at the age of 17 in Argentina. The range of ages for which at least 90% of the population are enrolled is shorter than the period of compulsory education and goes from the age of 4 to the age of 16. This differs from most OECD countries, where more than 90% of the population are enrolled for longer than the period of compulsory education.
- In Argentina, 47% of 18-24 year-olds are still in full- or part-time education or training at either upper secondary or tertiary level (below the OECD average of 54%). A subset of these students

(12% of 18-24 year-olds) combine their education or training with some form of employment in Argentina, compared to 17% on average across the OECD.

## Financial resources invested in education

- Public spending on primary to tertiary education was 11.1% of total government expenditure in Argentina (Figure 1), higher than the OECD average (10.6%). In contrast, relative to GDP, public spending on primary to tertiary education (4.3%) is lower than the OECD average (4.4%).

**Figure 1. Composition of total public expenditure on education as a percentage of total government expenditure (2019)**

Primary to tertiary education (including R&D), in per cent

1. Year of reference differs from 2019. Refer to the source table for more details.

2. Primary education includes pre-primary programmes.

Countries are ranked in descending order of total public expenditure on education as a percentage of total government expenditure.

Updated data can be found on line at <http://dx.doi.org/10.1787/eag-data-en> and by following the StatLinks  under the tables and charts in the publication.

Data on subnational regions for selected indicators are available in the *OECD Regional Statistics* (database) (OECD, 2022). When interpreting the results on subnational entities, readers should take into account that the population size of subnational entities can vary widely within countries. For example, regional variation in enrolment may be influenced by students attending school in a different region from their area of residence, particularly at higher levels of education. Also, regional disparities tend to be higher when more subnational entities are used in the analysis.

The data on educational responses during COVID-19 were collected and processed by the OECD based on the Joint Survey on National Responses to COVID-19 School Closures, a collaborative effort conducted by the United Nations Educational, Scientific and Cultural Organization (UNESCO); the UNESCO Institute for Statistics (UIS); the United Nations Children's Fund (UNICEF); the World Bank; and the OECD.
