

Education at a Glance 2023

Country note

Colombia

This country note provides an overview of the key characteristics of the education system in Colombia. It draws on data from *Education at a Glance 2023*. In line with the thematic focus of this year's *Education at a Glance*, it emphasises vocational education and training (VET), while also covering other parts of the education system. Data in this note are provided for the latest available year. Readers interested in the reference years for the data are referred to the corresponding tables in *Education at a Glance 2023*.

The output of educational institutions and the impact of learning

- Although an upper secondary qualification is often the minimum attainment needed for successful labour-market participation, some 25-34 year-olds still leave education without such a qualification.
 On average across the OECD, 14% of young adults have not attained an upper secondary qualification. In Colombia, the share is higher than the OECD average (23%).
- Tertiary attainment continues to increase among the working age population. On average across the OECD, tertiary attainment is becoming as common as upper secondary or post-secondary non-tertiary attainment among 25-64 year-olds. In Colombia, 28% of 25-64 year-olds have tertiary attainment, a smaller share than those that have upper secondary or post-secondary non-tertiary attainment (34%).
- On average across OECD countries, 14.7% of young adults aged 18-24 are not in education, employment or training (NEET), while in Colombia the corresponding figure is 28.7%. Reducing NEET rates among young adults is a particularly important challenge in all countries because those who become NEET face worse labour-market outcomes later in life than their peers who remained in education or training at this age.

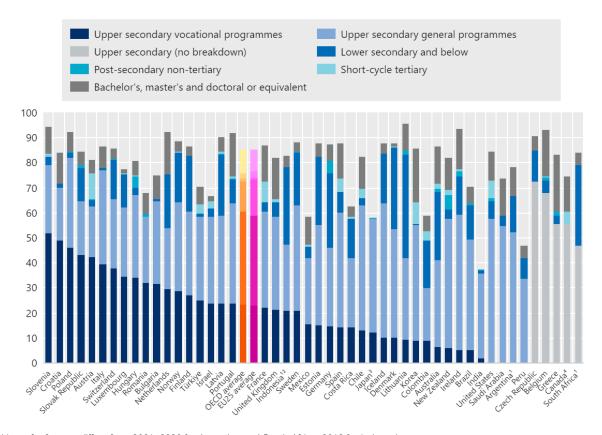

Access to education, participation and progress

- Participation in high-quality early childhood education (ECE) has a positive effect on children's well-being, learning and development in the first years of their lives. In Colombia, 46% of 2-yearolds are enrolled in ECE. This increases to 58% of 3-year-olds, 84% of 4-year-olds and 97% of 5year-olds.
- Compulsory education in Colombia starts at the age of 5 and continues until the age of 16. Students typically graduate between the ages of 16 and 17 from general upper secondary programmes. The age range for completing vocational programmes is just as wide, with students typically graduating from vocational upper secondary programmes also between 16 and 17. This is different from most OECD countries, where graduates from vocational upper secondary programmes have a wider age range, reflecting the greater diversity of pathways into these programmes than for general ones.

The large majority of 15-19 year-olds across the OECD are enrolled in education. In Colombia, 21% of this age group are enrolled in general upper secondary education and 9% in vocational upper secondary education. A further 19% are enrolled in lower secondary programmes and 10% in tertiary programmes. This compares to an OECD average of 37% enrolled in general upper secondary programmes, 23% in vocational upper secondary programmes, 12% in lower secondary programmes and 12% in tertiary programmes (Figure 1).

Figure 1. Enrolment rates of 15-19 year-olds, by level of education (2021)

In per cent

- 1. Year of reference differs from 2021: 2020 for Argentina and South Africa; 2018 for Indonesia.
- 2. Excludes students enrolled at tertiary levels.
- 3. Breakdown by age not available after 15 years old.
- 4. Excludes post-secondary non-tertiary education.

Countries are ranked in descending order of the share of students enrolled in upper secondary vocational education.

Source: OECD/UIS/Eurostat (2023), Table B1.2. For more information see Source section and <u>Education at a Glance 2023 Sources</u>, <u>Methodologies and Technical Notes</u> (OECD, 2023_[1]).

• On average across countries and other participants with comparable data, 77% of entrants into general upper secondary education successfully complete their upper secondary studies (either in general or in vocational programmes) within the theoretical duration of the programme. The completion rate increases by an average 10 percentage points within two years after the end of the theoretical duration. In Colombia, 84% of entrants into general upper secondary education complete their programme within the theoretical duration, but this share increases to 92% after allowing an additional two years.

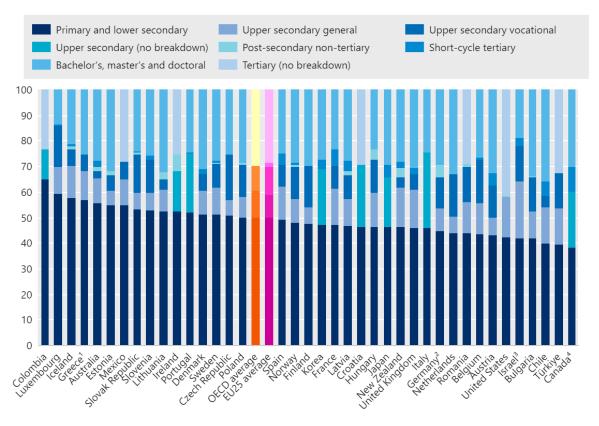

- Bachelor's programmes are the most popular programmes for new entrants to tertiary education.
 On average across the OECD, they attract 76% of all new students compared to 56% in Colombia.
 Short-cycle tertiary programmes are the second most common level of education for new entrants into tertiary education, but their importance differs widely across countries. In Colombia, they are chosen by 44% of all new entrants.
- Perhaps surprisingly, the share of international students at tertiary level has not been negatively
 affected by the COVID-19 pandemic in many OECD countries. However, a few countries
 experienced double digit declines in the share of international students. Colombia is not one of
 them, as the share of foreign students remained stable between 2019 and 2021 (0% of all tertiary
 students).

Financial resources invested in education

- All OECD and partner countries devote a substantial share of their domestic output to education. In 2020, OECD countries spent on average 5.1% of their gross domestic product (GDP) on primary to tertiary educational institutions. In Colombia, the corresponding share was 6.6% of GDP, of which 36% was dedicated to primary education, 29% to lower secondary education, 12% to upper secondary education and 23% to tertiary education (Figure 2).
- Funding for education in absolute terms is strongly influenced by countries' income levels.
 Countries with higher per capita GDP tend to spend more per student than those with lower per
 capita GDP. Across all levels from primary to tertiary education, Colombia spends USD 4 481
 annually per full-time equivalent student (adjusted for purchasing power), compared to the
 OECD average of USD 12 647. Expenditure per student is equivalent to 29% of per capita GDP,
 which is above the OECD average of 27%.
- The COVID-19 pandemic has created unprecedented challenges for education systems across the world. On average across the OECD, expenditure on primary to tertiary educational institutions per full-time equivalent student (including expenditure on research and development) grew by 0.4% from 2019 to 2020 (the first year of the pandemic and the latest period with available data). In Colombia, it increased by 9%. This change in expenditure per student is the result of total expenditure on educational institutions increasing by 7.5% and the total number of full-time equivalent students decreasing by 1.3%.
- Government sources dominate non-tertiary education funding in all OECD countries, while the
 private sector contributes 9% of the total expenditure on educational institutions on average.
 Private funding in Colombia accounted for 20% of expenditure at primary, secondary and postsecondary non-tertiary levels.
- On average across OECD countries, more than half of government expenditure on primary to postsecondary non-tertiary education comes from subnational governments. In Colombia, 88% of the funding comes from the central government, after transfers between government levels, 3% from the regional level and 9% from the local level.

Figure 2. Total expenditure on primary to tertiary educational institutions, by level of education (2020)

In per cent

- 1. Year of reference differs from 2020. Refer to the source table for more details.
- 2. Upper secondary vocational programmes include lower secondary vocational programmes.
- 3. Upper secondary programmes include lower secondary programmes.
- 4. Primary education includes pre-primary programmes.

Countries are ranked in descending order of total expenditure on primary and lower secondary institutions.

Teachers, the learning environment and the organisation of schools

- The total compulsory instruction time throughout primary and lower secondary education varies
 widely from country to country (Figure 3). Across the OECD, over the course of primary and lower
 secondary education, compulsory instruction time totals an average of 7 634 hours, distributed
 over nine grades. In Colombia, the total compulsory instruction time is higher, at 9 800 hours, over
 nine grades.
- On average across OECD countries, 25% of the compulsory instruction time in primary education is devoted to reading, writing and literature and 16% to mathematics. In lower secondary education, the share is 15% for reading, writing and literature and 13% for mathematics. Colombia is one of the few countries where there is no fixed share of instruction time spent on reading, writing and literature or mathematics at one or both of these levels.

Figure 3. Compulsory instruction time in general education (2023)

In hours, in primary and lower secondary education, in public institutions

Note: Instruction hours for each grade refer to average hours per grade for the level of education. Numbers in square brackets refer to the total number of years for primary and lower secondary education.

- 1. Estimated number of hours by level of education based on the average number of hours per year, as for some subjects, the allocation of instruction time across multiple levels is flexible.
- 2. Year of reference 2022.
- 3. The number of grades in lower secondary education is three or four, depending on the track. The fourth year of pre-vocational secondary education was excluded from the calculation.

Countries and other participants are ranked in ascending order of the total number of compulsory instruction hours.

Source: OECD (2023), Table D1.1. For more information see Source section and Education at a Glance 2023 Sources, Methodologies and Technical Notes (OECD, 2023_[1]).

- Teachers' salaries are an important determinant of the attractiveness of the teaching profession, but they also represent the single largest expenditure category in formal education. In most OECD countries, the salaries of teachers in public educational institutions increase with the level of education they teach, and also with experience. On average, annual statutory salaries for upper secondary teachers (in general programmes) with the most prevalent qualification and 15 years of experience are USD 53 456 across the OECD. In Colombia, the corresponding salary adjusted for purchasing power is USD 42 677, which is equivalent to COP 65 747 734. Upper secondary teachers in vocational programmes have the same statutory salaries as those in general programmes in Colombia.
- Between 2015 and 2022, statutory salaries of upper secondary teachers in general programmes (with the most prevalent qualification and 15 years of experience) declined in real terms in roughly half of all OECD countries with available data. In Colombia, upper secondary teachers' salaries increased by 25% between 2015 and 2021, the latest year with available data.

• National/central assessments (standardised tests with no consequence on students' progression through school or certification) are more common at primary and lower secondary levels than at upper secondary level, while most OECD countries conduct national/central examinations (standardised tests with formal consequence) in the final years of upper secondary education. These national/central assessments and examinations take place at different grades and can have different periodicities, their contents may vary over years and/or across students and are not necessarily compulsory for students. In Colombia, there are at least two national/central assessments at primary level, and at least two at lower secondary level. At upper secondary level, there is one national/central examination that each student may be expected to take.
