

Education at a Glance 2023

Country note

Israel

This country note provides an overview of the key characteristics of the education system in Israel. It draws on data from *Education at a Glance 2023*. In line with the thematic focus of this year's *Education at a Glance*, it emphasises vocational education and training (VET), while also covering other parts of the education system. Data in this note are provided for the latest available year. Readers interested in the reference years for the data are referred to the corresponding tables in *Education at a Glance 2023*.

The output of educational institutions and the impact of learning

- High-quality VET programmes integrate learners into labour markets and open pathways for further personal and professional development. However, the quality and importance of VET programmes differ greatly across countries. In some countries, half of all young adults (25-34 year-olds) have a vocational qualification as their highest level of educational attainment, while the share is in the low single digits in other countries. In Israel, 14% of 25-34 year-olds have a VET qualification as their highest level of attainment (Figure 1): 4% at upper secondary level and 10% at short-cycle tertiary level.
- Across the OECD, unemployment rates for 25-34 year-olds with vocational upper secondary attainment are lower than for their peers with general upper secondary or post-secondary non-tertiary attainment. This is also the case in Israel, where 5.2% of young adults with vocational upper secondary attainment are unemployed, compared to 5.4% of those with general upper secondary attainment.
- Although an upper secondary qualification is often the minimum attainment needed for successful labour-market participation, some 25-34 year-olds still leave education without such a qualification. On average across the OECD, 14% of young adults have not attained an upper secondary qualification. In Israel, the share is lower than the OECD average (9%).
- In almost all OECD countries, tertiary degrees provide a significantly larger earnings advantage. In Israel, 25-34 year-old workers with bachelor's attainment earn 94% more than their peers without upper secondary attainment, while those with master's or doctoral attainment earn 124% more.
- Tertiary attainment continues to increase among the working age population. On average across the OECD, tertiary attainment is becoming as common as upper secondary or post-secondary non-tertiary attainment among 25-64 year-olds. In Israel, 51% of 25-64 year-olds have tertiary attainment, a larger share than those that have upper secondary attainment (38%).
- On average across OECD countries, 14.7% of young adults aged 18-24 are not in education, employment or training (NEET), while in Israel the corresponding figure is 17.5%. The high share of NEETs in Israel is explained by the mandatory military service between age 18 and 21.

Figure 1. Share of 25-34 year-olds whose highest level of education has a vocational orientation, by level of educational attainment (2022)

In per cent

1. Data for upper secondary attainment include completion of a sufficient volume and standard of programmes that would be classified individually as completion of intermediate upper secondary programmes (9% of adults aged 25-34 are in this group).

2. Year of reference differs from 2022. Refer to the source table for more details.

Countries are ranked in descending order of the share of 25-34 year-olds who attained vocational upper secondary, vocational post-secondary non-tertiary or vocational short-cycle tertiary education.

Source: OECD (2023), Table A1.3. For more information see *Source* section and [Education at a Glance 2023 Sources, Methodologies and Technical Notes](#) (OECD, 2023^[11]).

Access to education, participation and progress

- Participation in high-quality early childhood education (ECE) has a positive effect on children's well-being, learning and development in the first years of their lives. In Israel, 69% of 2-year-olds are enrolled in ECE. This increases to 100% of 3-year-olds, 97% of 4-year-olds and 96% of 5-year-olds.
- Compulsory education in Israel starts at the age of 3 and continues until the age of 17. Students typically graduate between the ages of 17 and 18 from general upper secondary programmes. The age range for completing vocational programmes is just as wide, with students typically graduating from vocational upper secondary programmes also between 17 and 18. This is different from most OECD countries, where graduates from vocational upper secondary programmes have a wider age range, reflecting the greater diversity of pathways into these programmes than for general ones.

- The large majority of 15-19 year-olds across the OECD are enrolled in education. In Israel, 35% of this age group are enrolled in general upper secondary education and 24% in vocational upper secondary education. A further 3% are enrolled in lower secondary programmes and 5% in tertiary programmes. This compares to an OECD average of 37% enrolled in general upper secondary programmes, 23% in vocational upper secondary programmes, 12% in lower secondary programmes and 12% in tertiary programmes (Figure 2).

Figure 2. Enrolment rates of 15-19 year-olds, by level of education (2021)

In per cent

1. Year of reference differs from 2021: 2020 for Argentina and South Africa; 2018 for Indonesia.

2. Excludes students enrolled at tertiary levels.

3. Breakdown by age not available after 15 years old.

4. Excludes post-secondary non-tertiary education.

Countries are ranked in descending order of the share of students enrolled in upper secondary vocational education.

Source: OECD/UIS/Eurostat (2023), Table B1.2. For more information see [Source section](#) and [Education at a Glance 2023 Sources, Methodologies and Technical Notes](#) (OECD, 2023^[1]).

- Bachelor's programmes are the most popular programmes for new entrants to tertiary education. On average across the OECD, they attract 76% of all new students compared to 76% in Israel. Short-cycle tertiary programmes are the second most common level of education for new entrants into tertiary education, but their importance differs widely across countries. In Israel, they are chosen by 24% of all new entrants.
- Perhaps surprisingly, the share of international students at tertiary level has not been negatively affected by the COVID-19 pandemic in many OECD countries. However, a few countries experienced double digit declines in the share of international students. Israel is not one of them,

as the share of international students increased from 3% of all tertiary students in 2019 to 5% in 2021.

Financial resources invested in education

- All OECD and partner countries devote a substantial share of their domestic output to education. In 2020, OECD countries spent on average 5.1% of their gross domestic product (GDP) on primary to tertiary educational institutions. In Israel, the corresponding share was 6.4% of GDP, of which 42% was dedicated to primary education, 3% to short-cycle tertiary programmes and 19% to bachelor's, master's and doctoral programmes (Figure 3).

Figure 3. Total expenditure on primary to tertiary educational institutions, by level of education (2020)

In per cent

1. Year of reference differs from 2020. Refer to the source table for more details.

2. Upper secondary vocational programmes include lower secondary vocational programmes.

3. Upper secondary programmes include lower secondary programmes.

4. Primary education includes pre-primary programmes.

Countries are ranked in descending order of total expenditure on primary and lower secondary institutions.

Source: OECD/UIS/Eurostat (2023), Table C2.1. For more information see [Source](#) section and [Education at a Glance 2023 Sources, Methodologies and Technical Notes](#) (OECD, 2023_[1]).

- Funding for education in absolute terms is strongly influenced by countries' income levels. Countries with higher per capita GDP tend to spend more per student than those with lower per

capita GDP. Across all levels from primary to tertiary education, Israel spends USD 10 279 annually per full-time equivalent student (adjusted for purchasing power), compared to the OECD average of USD 12 647. Expenditure per student is equivalent to 26% of per capita GDP, which is below the OECD average of 27%.

- The COVID-19 pandemic has created unprecedented challenges for education systems across the world. On average across the OECD, expenditure on primary to tertiary educational institutions per full-time equivalent student (including expenditure on research and development) grew by 0.4% from 2019 to 2020 (the first year of the pandemic and the latest period with available data). In Israel, it remained stable. This is the result of total expenditure on educational institutions increasing by 2.2% and the total number of full-time equivalent students increasing by 2.2%.
- The distribution of spending between general and vocational upper secondary programmes depends on a variety of factors, such as the number of VET students, the fields of study within VET programmes and the importance given to VET relative to general programmes. In Israel, 22% of all funding for educational institutions is spent on general upper secondary education and 14% on vocational upper secondary education (11% and 10% respectively on average across the OECD).
- Government sources dominate non-tertiary education funding in all OECD countries, while the private sector contributes 9% of the total expenditure on educational institutions on average. Private funding in Israel accounted for 8% of expenditure at primary, secondary and post-secondary non-tertiary levels.
- In most countries, private sources accounted for similar shares of expenditure on general and vocational programmes at upper secondary level. However, in a few countries the differences in the share of private funding between general and vocational programmes were wider. In Israel, the private sector is responsible for 9% of expenditure on general upper secondary programmes and 18% of expenditure on vocational upper secondary programmes.
- On average across OECD countries, more than half of government expenditure on primary to post-secondary non-tertiary education comes from subnational governments. In Israel, 70% of the funding comes from the central government, after transfers between government levels and 30% from the local level.

Teachers, the learning environment and the organisation of schools

- The total compulsory instruction time throughout primary and lower secondary education varies widely from country to country (Figure 4). Across the OECD, over the course of primary and lower secondary education, compulsory instruction time totals an average of 7 634 hours, distributed over nine grades. In Israel, the total compulsory instruction time is higher, at 8 440 hours, over nine grades.
- On average across OECD countries, 25% of the compulsory instruction time in primary education is devoted to reading, writing and literature and 16% to mathematics. In lower secondary education, the share is 15% for reading, writing and literature and 13% for mathematics. In Israel, 29% of time is devoted to reading, writing and literature and 15% to mathematics at primary level compared to 34% and 14% at lower secondary level.

Figure 4. Compulsory instruction time in general education (2023)

In hours, in primary and lower secondary education, in public institutions

Note: Instruction hours for each grade refer to average hours per grade for the level of education. Numbers in square brackets refer to the total number of years for primary and lower secondary education.

1. Estimated number of hours by level of education based on the average number of hours per year, as for some subjects, the allocation of instruction time across multiple levels is flexible.

2. Year of reference 2022.

3. The number of grades in lower secondary education is three or four, depending on the track. The fourth year of pre-vocational secondary education was excluded from the calculation.

Countries and other participants are ranked in ascending order of the total number of compulsory instruction hours.

Source: OECD (2023), Table D1.1. For more information see *Source* section and [Education at a Glance 2023 Sources, Methodologies and Technical Notes](#) (OECD, 2023^[11]).

- Teachers' salaries are an important determinant of the attractiveness of the teaching profession, but they also represent the single largest expenditure category in formal education. In most OECD countries, the salaries of teachers in public educational institutions increase with the level of education they teach, and also with experience. On average, annual statutory salaries for upper secondary teachers (in general programmes) with the most prevalent qualification and 15 years of experience are USD 53 456 across the OECD. In Israel, the corresponding salary adjusted for purchasing power is USD 39 321, which is equivalent to ILS 167 890. Upper secondary teachers in vocational programmes have the same statutory salaries as those in general programmes in Israel.
- Besides average teacher salaries themselves, annual teaching time requirements, annual hours of compulsory instruction time for students, and class size also impact total spending on teacher salaries. When combined, these factors can be used to estimate an average cost of salaries per student and show the relative impact of each individual factor on total salary spending. Total

teacher salary costs per primary student are USD 2 862 in Israel, lower than the OECD average of USD 3 614. This difference can be broken down into these four factors: lower teacher salaries reduce costs (by USD 446), above-average teaching hours reduce costs (by USD 338), above-average student instruction time increases costs (by USD 520) and larger classes reduce costs (by USD 487). Between 2015 and 2021, the salary cost of teachers per student increased by 9% in Israel (from USD 2 624 to USD 2 862).

- Between 2015 and 2022, statutory salaries of upper secondary teachers in general programmes (with the most prevalent qualification and 15 years of experience) declined in real terms in roughly half of all OECD countries with available data. In Israel, upper secondary teachers' salaries increased by 35% between 2015 and 2022.
- National/central assessments (standardised tests with no consequence on students' progression through school or certification) are more common at primary and lower secondary levels than at upper secondary level, while most OECD countries conduct national/central examinations (standardised tests with formal consequence) in the final years of upper secondary education. These national/central assessments and examinations take place at different grades and can have different periodicities, their contents may vary over years and/or across students and are not necessarily compulsory for students. In Israel, there are at least two national/central assessments at primary level, and at least two at lower secondary level. At upper secondary level, there is one national/central examination that each student may be expected to take.
